

Downloading GitBash for Windows Users

For this class all Window users must download gitbash to operate within a bash command line

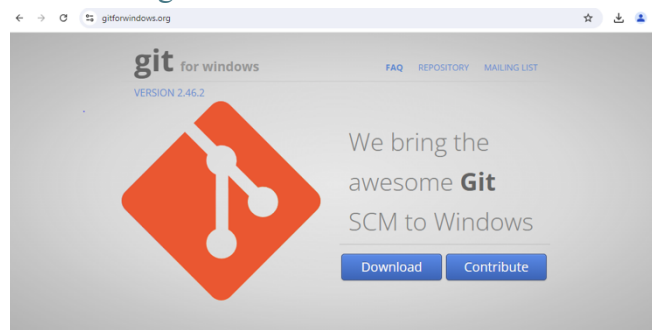

1. Bash Shell for Windows

Git Bash provides the Bash shell (Bourne Again Shell), which is a popular Unix/Linux shell. For developers used to Linux or macOS, Git Bash offers an environment similar to what they're familiar with, bringing Unix-like command-line utilities (like ssh, scp, ls, grep, etc.) to Windows.

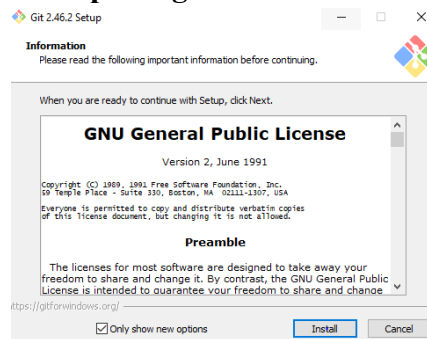

How to Download:

- **Search GitBash for windows in search browser or click this link.**

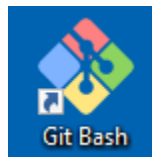

<https://gitforwindows.org/>

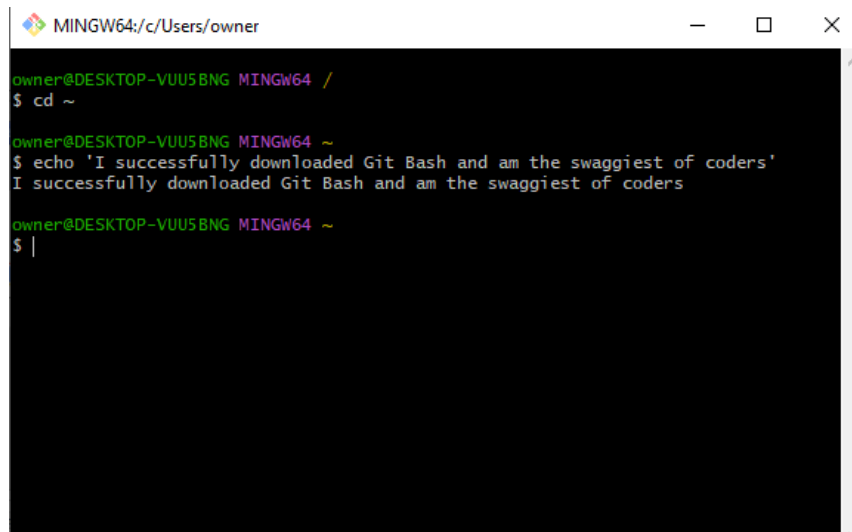

- **Install the git downloader package.**

- **Launch Git Bash Application. Search for the GitBash application using the windows search bar. Double click on the Gitbash application.**

- Terminal should appear as such. Double check everything works as expected.

A screenshot of a Windows terminal window titled "MINGW64: c:/Users/owner". The terminal shows the following commands and output:

```
owner@DESKTOP-VUU5BNG MINGW64 /  
$ cd ~  
  
owner@DESKTOP-VUU5BNG MINGW64 ~  
$ echo 'I successfully downloaded Git Bash and am the swaggiest of coders'  
I successfully downloaded Git Bash and am the swaggiest of coders  
  
owner@DESKTOP-VUU5BNG MINGW64 ~  
$ |
```

Great! May the Bash terminal be with you, and may your code always avoid the dark side!
